JOHN RAFAEL MANABAT

DevSecOps Engineer

Portfolio • jramanabat@gmail.com • 0976-387-8788 • Taguig, Philippines

PROFESSIONAL SUMMARY

DevSecOps Engineer with experience securing CI/CD pipelines and AWS environments. Skilled in Infrastructure as Code (Terraform), Linux system administration, Bash and Python scripting, vulnerability management, and compliance controls for PCI-DSS and HIPAA. Experienced in using Claude to assist with building Python scripts and automation while understanding the purpose, logic, and security impact behind the solutions. Focused on improving security, automation, and reliability across cloud infrastructure and development workflows.

WORK EXPERIENCE

Netlify *May 2025 – August 2026*

DevSecOps Engineer (Contract)

- Set up Terraform infrastructure from scratch, creating separate dev/prod environments with remote state management and state locking for safe, concurrent deployments
- Integrated security scanning tools including Prowler (AWS cloud security posture), Trivy (vulnerability and container scanning), and Checkov (IaC misconfiguration scanning) into the development and infrastructure workflow to catch issues earlier
- Build and maintain secure CI/CD pipelines, ensuring reliable and automated software delivery
- Built a Python commit audit tool to flag unverified contributors, helping the security team quickly distinguish real issues from misconfigurations
- Built a SOPS-based key-rotation inventory tracking 100+ secrets, monitoring cryptographic key age against rotation policy; reported findings monthly to the CISO
- Manage AWS security patching and updates on Linux-based infrastructure, cross-checking GitHub release notes/changelogs to verify fixes and catch breaking changes before deployment
- Manage AWS security patching and updates on Linux-based infrastructure, cross-checking GitHub release notes/changelogs to verify fixes and catch breaking changes before deployment
- Ensure PCI-DSS and HIPAA compliance through improved controls, monitoring, and documentation
- Presented on the Vulnerability Management Process during CyberSecurity Awareness Month to improve company-wide security understanding
- Test and evaluate third-party security products, including Mesh Security, documenting findings for the Principal Security Engineer and CISO

CoreProc Inc. *Aug 2024 – May 2025*

DevOps Engineer (Contract — Philip Morris International project)

- Maintained and enhanced Terraform infrastructure as code, ensuring smooth operation of resources.
- Built an AWS dashboard from scratch using Terraform, deployed across all microservices; investigated and traced a dashboard anomaly to a developer code error through log analysis
- Resolved recurring AWS resource duplication issues in Jenkins CI/CD pipelines, improving deployment reliability
- Managed and improved CI/CD pipelines in Jenkins, debugging errors and resolving developer issues.
- Deployed and managed applications in AWS ECS across dev, QA, and prod on Linux servers; monitored performance via CloudWatch.
- Collaborated with internal teams, outsourced developers, and stakeholders on Agile Scrum ceremonies to ensure reliable deployments.

Prosperna *Apr 2024 – Aug 2024*

DevOps Engineer (Intern)

- Built CI/CD pipelines and created Bash scripts to automate testing, building, and deployment.
- Managed containerized applications across dev, QA, and prod using AWS; monitored performance and resolved bottlenecks using Datadog.
- Handled domain transfers and configuration using Cloudflare.

PERSONAL PROJECTS

DevSecOps Pipeline Demo (Python / FastAPI)

Built and deployed a containerized service with Kubernetes autoscaling, Prometheus/Grafana monitoring, and CI-integrated security scanning (Bandit) via GitHub Actions.

SKILLS

DevSecOps & Cloud Security • Vulnerability Management • Terraform (IaC) • Linux System Administration • Bash Scripting • CI/CD Pipeline Design & Automation • Compliance & Governance (PCI-DSS, HIPAA) • Monitoring, Logging & Incident Response • Agile Scrum & Cross-Functional Collaboration • Third-Party Security Vendor Evaluation

TOOLS AND TECHNOLOGIES

Operating Systems / Scripting: Linux, Bash, Python
IaC / CI/CD: Terraform, Git, GitHub, GitHub Workflows, ArgoCD, CircleCI, BitBucket, Jenkins
Container Orchestration: Kubernetes, Docker
AWS Cloud: ECS, EC2, S3, IAM, Lambda, CloudTrail, CloudWatch
Security & Compliance: Trivy, Prowler, Wiz, Checkov, CISA/KEV, HIPAA, PCI-DSS
AI-Assisted Development: Claude Code
Project Management: Linear, JIRA, Confluence

EDUCATION

Adamson University — Bachelor of Science in Mechanical Engineering
2018 – 2023
